

Three participatory geographers: reflections on positionality and working with participants in researching religions, spiritualities, and faith

Journal:	<i>Social and Cultural Geography</i>
Manuscript ID	RSCG-2019-0169.R2
Manuscript Type:	Original Paper
Keywords:	geographies of religion, participatory geographies, faith, spirituality, positionality, researchers with faith
Abstract:	<p>This paper advances the geographies of religion, spirituality and faith’s limited attention to positionality by discussing the critical issues raised when using participatory approaches. Reflecting on three cases of participatory research, we foreground the dynamics of being a researcher with faith when working with participants from faith communities. Advocating participatory approaches as valuable methodologies that should be used more extensively to explore beliefs, faith practices, and social justice, we argue that greater attention needs to be given to the positionality of researchers undertaking this sort of research. Our cases raise three themes for discussion. First, the variety of ways in which faith positionalities influence how research is developed, conducted and concluded. Second, the intersections between our faith and other positionalities and how they shape our roles and relationships with research participants. Third, the fluid and multifaceted nature of faith positionalities and how they are changed, emphasized, and softened through the dynamics and entanglements of fieldwork. In doing so, we reflect on the complexities of being a researcher with faith, argue that faith positionality is a helpful dimension of their research rather than a limitation, and that all cultural, social and historical geographical researchers should reflect on their faith positionality.</p>

43 **Introduction**

44 At the turn of the twenty-first century Lily Kong (1990 and 2001) called for the revision and
45 revitalisation of the geographies of religion. Initially, scholars focused on explicitly
46 'religious' communities and the geographical nature of the theologically driven events they
47 organized (Olson, 2008; Sanderson, 2008). In the subsequent decade, geographers of religion
48 have considered an ever-expanding range of faith positions and spiritual practices (Bettis Gee
49 & Smith, 2015; Hopkins, Olson, Bailie Smith & Laurie, 2015; Williams, 2016). While
50 religious groups and their specific theological ideas are still discussed, there is an increasing

60

1
2
3 emphasis on individuals' personal spiritualities and everyday expressions (Brace, Bailey,
4 Carter, Harvey & Thomas, 2011; Sutherland, 2016). In a significant development, in order to
5 gain insights into these narratives, geographers interested in religion, faith, and spirituality
6 have begun to embrace and contribute to the simultaneous development of participatory
7 geographical approaches (for example Williams, 2017). However, despite this developing
8 research the positionality of geographers' co-producing knowledge with religious
9 communities has not been given sufficient attention. Whilst advocating for continued
10 development of these participatory approaches, this paper reflects on the particular issues of
11 positionality that are raised - and need to be addressed - when using participatory methods to
12 study the geographies of religion, faith and spirituality.

29 Drawing together the experiences of three Christian geographers with varying faith
30 positionalities undertaking participatory research with contemporary faith groups and
31 activities, this paper specifically focusses on how our positionality as researchers with
32 religious faith influenced our research processes. Using the experiences, alignments, and
33 tensions of our individual fieldwork, we articulate the value in sharing faith with research
34 participants, the role our faith played in influencing the inquiry process, and the resulting
35 opportunities and challenges for working with groups and communities. Given the nature of
36 this paper, we consider faith both as a concept and a personal attribute held by the researchers
37 and participants. Our academic approach to the concept of faith is shaped by Brace et al.'s
38 (2011, p. 3) discussion of faith as 'a belief-ful relationship with an object that cannot be
39 accessed through doctrinal statement and ritual alone'. Therefore, we understand faith to be
40 an emotional and spiritual connection with an entity beyond the self that is structured by
41 theologies and practices, while being more than these manifestations. This position
42 acknowledges faith as an objective category for researchers that is intimately linked with
43

2
3 individual and collective identity and lifestyle choices. Alongside this definition of the
4
5 concept of faith, is our appreciation of what faith means for us personally as ‘a way of
6
7 experiencing life, and a willingness to act’ (Miles 2012, p. xvi) that is a component of our
8
9 identities. The vignettes which follow expand on each of our faith experiences and actions
10
11 and how they inform our positionality, and in doing so this paper will draw these parallel
12
13 understandings of faith together. The dynamics and dialogue between our academic selves
14
15 and our faith, informed by Slater’s (2004) reflections, will form one of its key strands,
16
17 enabling examinations of how geographers of faith can engage with their own and other
18
19 religious communities.
20
21
22
23
24
25

26 The paper therefore contributes to recent developments within the geographies of religion,
27
28 spirituality, and faith; participatory geographies; and the synergies in their meeting. We begin
29
30 by framing our approach within participatory geographies, discussions of positionality, and
31
32 the geographies of faith. Next, we each present a reflective vignette of our own faith
33
34 positionality through recent participatory research. These three strands are then combined in a
35
36 collective examination of the varying effects of researchers’ faith positionalities; the
37
38 intersections between our faith positionalities and other positionalities; and how our
39
40 positionality changed in response to undertaking participatory research. We conclude the
41
42 paper by outlining how our insights have the potential to influence further work in the
43
44 geographies of religion, spirituality, faith, and beyond.

51 **Participatory geographies, positionality and faith**

52 While participatory approaches have gained prominence within geographical research (for
53
54 example Kindon, Pain & Kesby, 2009; Wynne-Jones, North & Routledge, 2015), the
55
56 potential insights that could be gained by utilising this methodology within the study of
57
58
59
60

1
2
3 religion, faith, and spirituality are still embryonic. Participatory geographies emphasize co-
4
5 production of knowledge with research participants (Askins, 2018) and engage groups
6
7 beyond academia in the research process (Wynne-Jones et al., 2015). The few applications of
8
9 participatory approaches to religious settings have demonstrated their value in this context.
10
11 For example, Andrew Williams (2017) provides an evocative account of ethnographic work
12
13 at a faith-based addiction treatment centre and the ethical conflicts he encountered within that
14
15 research, providing a template for other geographers to follow. Secondly, Claire Dwyer, Katy
16
17 Beinart, and Nazneen Ahmed's (2018) examination of their co-involvement in an embroidery
18
19 project exploring prayer with women from different faiths, illustrates the potential of co-
20
21 creative research to enable access to ethereal themes.
22
23
24
25
26
27

28
29 Our own research, as discussed in this paper, has identified three further benefits of
30
31 participatory approaches within geographies of religion. First, how they allow scholars to
32
33 understand how faith actions can have more meaning to faithful subjects than may at first be
34
35 apparent (for example giving food is a physical activity but can also act out Biblical teaching
36
37 (Denning, 2019)). Second, how they provide a means to engage with spirituality in people's
38
39 daily lives, beyond sacred spaces and explicitly religious communities (Bartolini, MacKian,
40
41 & Pile 2019; Kong 2010; Sutherland 2016). Third, how they can facilitate a richer
42
43 understanding of faith-based social action initiatives, for which participation and action are
44
45 fundamental (see Bettis Gee & Smith, 2015). As a result, this paper is an explicit call for
46
47 more participatory research to be undertaken within geographical studies of religion.
48
49
50
51
52
53

54
55 However, if participatory approaches are more regularly utilized in the geographies of
56
57 religion, greater attention also needs to be paid to the particular issues around positionality
58
59 which arise when undertaking research into religion, faith, and spirituality. In non-religious
60

1
2
3 contexts, human geographers have long discussed the issue of positionality and how
4
5 researchers' identities influence relationships with participant communities. Over twenty
6
7 years ago Gillian Rose (1997) articulated a feminist critique of positionality, highlighting
8
9 both its fluidity and politics, while soon after Herod (1999) disrupted the neat dualism of
10
11 insider-outsider by discussing the shifting contexts and complexities of research encounters.
12
13 Having dispelled the artificiality of the detached observer, geographers have come to
14
15 recognize and value their inherent involvement with participants and communities (Cragg &
16
17 Cook, 2007). Encountering a vast range of practical, social, and ethical challenges,
18
19 researchers have developed rigorous and self-reflexive work that acknowledges and evaluates
20
21 their participation (Caretta & Jokinen, 2017). In particular, participatory geographies
22
23 emphasize positionality as a dimension of research contexts, which the researcher can enact
24
25 upon, ideally for positive social change (Brydon-Miller, 2004). The role of the researcher and
26
27 their positionality is key in participatory research, as is their willingness to learn rather than
28
29 perceive themselves as experts extracting knowledge from participants (Wynne-Jones, et al.,
30
31 2015). Crucial to this, is an appreciation of how positionalities can change over time and are
32
33 not static throughout the research process. Therefore, at different times different elements of
34
35 a researcher's positionality can be more significant and influential than others.
36
37
38
39
40
41
42
43
44

45 Just as participatory approaches have only recently begun to be utilized within the
46
47 geographies of religion, faith, and spirituality, the positionality of those researching this area
48
49 has received limited attention - whether they are utilising participatory methodologies or not.
50
51 Adrian Bailey, Catherine Brace and David Harvey (2009) notably reflected on how their
52
53 collaborative archival research into nineteenth-century Cornish Methodism was influenced by
54
55 their differing faith and atheist positionalities. Our paper follows Bailey et al. with a
56
57 discussion of faith and positionality from three geographers, but differs in that we are all
58
59
60

1
2
3 Christian and each reflect on separate research projects. Terry Slater's (2004)
4
5 autobiographical account of his experience of God remains one of the most prominent
6
7 examinations of an individual's faith positionality, albeit in a personalized and contained
8
9 setting. Significantly, Slater highlighted how 'few geographers speak as 'insiders' when
10
11 writing about religious geography from whatever faith tradition' (p. 246). This caution may
12
13 result from researchers with faith needing to justify their choice of religious subject and
14
15 ability to be critical because it is often still the case that as Ethan Yorgason and Veronica
16
17 della Dora (2009, p. 632) wrote, 'the identity of the religious geographer may often be
18
19 stigmatized or considered taboo in most 'politically correct' and yet rigorously secular
20
21 academic environments.' This is problematic, as shared faith is no more likely than another
22
23 aspect of an individual's positionality to restrict a researcher's ability to be critical. Rather, as
24
25 with any researcher's positionality, faith positionality holds both advantages and
26
27 disadvantages which we draw out through our cases in this paper. In more recent additions to
28
29 Slater's (2004) call for more insider approaches, Nina Laurie (2010) highlighted the need for
30
31 researchers to be firm in their faith, while being open to the range of responses that may
32
33 incur, and Claire Dwyer (2016) called for more critical approaches that respectfully recognize
34
35 and engage with individual faith, including that of researchers. This paper's primary
36
37 argument is that while more participatory approaches in the geographies of religion should be
38
39 encouraged, there is also a clear need for greater consideration to be paid to researchers'
40
41 positionality within this context.

51 **Faith, positionality and volunteering: Stephanie's reflections**

52
53 Over twenty months I established and ran a social franchise project (Lunch) in a church in a
54
55 deprived inner city through the national Christian charity TLG. TLG MakeLunch kitchens
56
57 respond to holiday hunger – children's food poverty in the school holidays – by running
58
59
60

1
2
3 holiday clubs with free lunches. At Lunch I was both the project leader and a researcher.
4
5 Lunch relied upon volunteers who were all aware of my role as a researcher, but participation
6
7 in the research was voluntary with forty-two of the seventy-eight volunteers opting-in
8
9 through interviews and/or writing diaries. I established Lunch with the intention of it
10
11 continuing beyond the lifespan of the research and it was important to the ethics of the
12
13 participatory research that Lunch did not run exclusively for research purposes, and aimed to
14
15 make a sustainable response to holiday hunger in the community. Lunch had a Christian
16
17 ethos, ran in a church hall, and the majority of volunteers were Christian, but there was no
18
19 religious content at Lunch for the children.
20
21
22
23
24
25

26 Being Christian was an important aspect of my positionality in participatory research at a
27
28 church. In this section, I explore how my Christian faith affected how Lunch unfolded and
29
30 how I interpreted Lunch volunteers' narratives. My faith positionality was framed through
31
32 being Anglican, a regular worshipper, and of a relatively liberal tradition. This 'type' of faith
33
34 was similar to the majority of volunteers at Lunch. Like myself, the majority of volunteers
35
36 were therefore comfortable with the lack of religious content for children at Lunch. That said,
37
38 the church in which Lunch took place was more evangelical Anglican in its worship style
39
40 which was different to my own background. It is therefore necessary to recognize that 'being
41
42 Christian' is not a single positionality or universal category.
43
44
45
46
47
48

49 First, my faith affected how I as the project leader ran Lunch. Through my faith I emphasized
50
51 social action for its own sake without evangelism which meant that we made Lunch open to
52
53 all local children in the area, and put emphasis on food and play (see Cloke, Beaumont &
54
55 Williams, 2012 for a discussion of faith, social action and evangelism). Had I had a different
56
57 understanding of the implications of faith for social action then how I established Lunch
58
59
60

1
2
3 could have been different, for example with Biblical teaching. How I ran Lunch was also
4 affected by my positionality in terms of commitment to the project continuing. I differed to
5 Lunch volunteers in that my PhD research also depended on Lunch. However, relatively early
6 on in running Lunch I felt that I had sufficient 'material' for the research, and so whatever
7 happened next would change the narratives of the research analysis but not determine its
8 success. To this extent my commitment to Lunch was more in terms of my faith and wanting
9 the project to continue to respond to holiday hunger.
10
11
12
13
14
15
16
17
18
19
20

21 Despite the overall faith commonality between myself and volunteers, the church where
22 Lunch ran was not a church that I worshipped at so I felt that I aroused suspicion from some
23 church members in being both someone from outside the community and a researcher, and so
24 it took time to develop genuine relationships. Volunteering regularly at the church youth
25 group for six months before Lunch was launched was significant in gaining some trust.
26 However, in July 2015 when Lunch first started, there was still wavering trust between
27 myself and some key church members. This only truly became more positive after running
28 Lunch again in October 2015, by which time relationships had developed and I had explicitly
29 shown genuine intentions. However, my sharing of Christian faith with the group was
30 significant in establishing a point of similarity between myself and the church community
31 when in many respects I was an outsider, coming from a position of relative privilege. This is
32 illustrated in my diary extract (09/03/2015) below from volunteering at the church youth
33 group before establishing Lunch:
34
35
36
37
38
39
40
41
42
43
44
45
46
47
48
49

50
51 A lady I had not met before opened the door to me and I recognized her from the
52 church website as [part of the church leadership]... She asked how I came to be there;
53
54 "was I from church or secular?"
55
56
57
58
59
60

1
2
3 In this example it was important to the lady I had just met whether I was from a church or
4 not. Had faith not been an element of my positionality, it is questionable whether I would
5
6 have been able to generate the church leadership's support for Lunch, whether the project
7
8 would have had the same degree of success, and if the church would have continued running
9
10 Lunch after I handed it over.
11
12
13

14
15
16
17 Secondly, my Christian faith affected how I understood and interpreted Lunch volunteers'
18 narratives in the research. Being Christian allowed me to experience from 'within' the role
19 that faith can play in volunteering. In particular, my faith helped me to recognize and
20 understand people's narratives when they referred to faith as resulting in meaning that was
21 more than what was represented (Denning, 2019), whereas this could have been missed had I
22 not been familiar with faith language and faith connotations. One example is volunteer
23 Violet's writing in her summer 2015 diary:
24
25
26
27
28
29
30
31
32

33 Just doing things doesn't change anything, there has to be some listening too and
34 enabling people to change themselves. It wasn't us who got [child] to try jacket
35 potatoes, it was his friends, a bit like the man being lowered into the house for Jesus
36 to heal. (Violet, volunteer diary, 07/08/2015)
37
38
39
40
41

42 My faith gives an immediate understanding that Violet is referring here to a Biblical miracle
43 of the paralysed man and that this is significant for understanding her first sentence. Would
44 Violet have written in this way if I had been an atheist? This is not a question I have asked
45 her, but from attending church together and coming from the same faith tradition, she would
46 have known that I would 'get' this reference without her making it explicitly a Biblical
47 citation. This is just one example of how my faith shaped how I was able to understand and
48 interpret volunteers' narratives, showing how through our shared faith I was more readily
49 able to understand moments that had meaning beyond what was represented. How faith
50
51
52
53
54
55
56
57
58
59
60

1
2
3 shaped interpretation stretched further than this because it also made a difference that
4
5 volunteers and I had shared experiences at Lunch and had been predominantly motivated to
6
7 volunteer by our faith (Denning, forthcoming). This facilitated how I was able to interpret
8
9 and write about my own and others' experiences in this research: being with people in an
10
11 experience, and with a similar motivation gives a different starting point for analysis because
12
13 the researcher starts with greater shared commonality with the participants and greater
14
15 understanding of the nuances of that experience, than had they not also been there.
16
17
18
19
20

21
22 However, this is not to say that research in faith communities could not have been undertaken
23
24 by someone without a faith positionality, nor that a shared faith positionality is superior or a
25
26 universal category. As well as it being important to show my commitment to the church and
27
28 to Lunch and to establish trust and positive relationships, in running a project responding to
29
30 holiday hunger it was also necessary that I addressed a further element of my positionality:
31
32 my relative economic privilege. Action researcher Mary Brydon-Miller (2004, p. 3) refers to
33
34 the 'terrifying truth' of whether to act or not: fear of one's own privilege can reduce a person
35
36 to inaction. Whilst I recognized my privilege and through this a degree of power, inaction
37
38 would have been a poorer option than acting and acknowledging that power and positionality
39
40 exist because ultimately, without my action in establishing Lunch, it would not have occurred
41
42 in this area and church at this time. For example, I used academic grant writing skills to
43
44 obtain three years of funding for Lunch. In this context, it was important to endeavour to lead
45
46 the project sensitively and to recognize that my positionality changed over time as trust was
47
48 gained, and relationships were developed. This was influenced by my Christian faith, but
49
50 these reflections show that a shared faith positionality is not a panacea for participatory
51
52 research.
53

Faith, positionality and pilgrimage: Richard's reflections

On Lough Derg, a pilgrimage centre in the north-west of Ireland, I was a pilgrim. I was also a researcher focused on documenting and understanding the experience. My participation enabled engagement with fellow pilgrims to co-consider the character and impact of these spiritual journeys. As well as providing deep insight into the pilgrimage, it (unexpectedly) promoted examination of my faith.

Lough Derg blends an isolated lake-island with a set of centuries-old practices including fasting, keeping a twenty-four hour vigil, being barefoot, and performing a series of prayer stations. It is a retreat crafted from the remote landscape and a medieval aesthetic. While it is a Roman Catholic centre, it is open to those entering 'into a new stage in their lives and in their relationship with God' or for others seeking 'answers to life's questions and have come to pray for guidance, patience, courage and peace of mind' (Lough Derg, 2019). It is a what Turner & Turner (1978) referred to as a 'liminal' location, as transitional space separate from the everyday enabling participants to engage in reflective and transformative journeys. My task was to enter this sanctuary with a hybrid identity as pilgrim-researcher.

My involvement was facilitated by the inclusive character of pilgrimages, which has been a central element to their revival. Individuals and groups can participate for overlapping personal, spiritual, and recreational motivations (Lopez, González, Fernández, 2017). I adopted an auto-ethnography to examine a range of experiences, including my own (Scriven, 2019). This approach is found in pilgrimage studies with Michalowski and Dubisch (2001) articulating an 'observant participation' to account for their intimate involvement as researchers and pilgrims, which has been adopted by others to situate their participation (Maddrell & Della Dora, 2013; Maddrell and & Scriven, 2016). Building on these

1
2
3 trajectories, I harnessed opportunities to share experiences to co-produce knowledge, which
4 presented different issues of positionality.
5
6
7
8
9

10 Given the research topic, the examination of my religious beliefs was relevant. At the time, I
11 identified as a liberal Roman Catholic. In this setting my religious affiliation combined with
12 other features of my identity as a White, Heterosexual, Irish, Settled, Catholic (WHISC)
13 (Tracy, 2000) granting me considerable privilege. Having grown up Catholic in a Catholic
14 majority country I was religiously and culturally embedded in the pilgrimage. I was an
15 insider; other pilgrims recognized me as being of their milieu. Moreover, it was often
16 assumed my research was religiously motivated, which assisted in gaining access. My
17 privilege demanded on-going examination to ensure critical, rigorous research. An essential
18 component of auto-ethnography is an on-going self-reflection/critique of my role and its
19 relationship to the participants and the work (Sultana, 2007). I understood the practices as
20 normative ways of expressing emotions and personal intentions; but, I am also a geographer
21 who steps back to study these processes. Within the fieldwork and my subsequent
22 interpretations, my faith emerged and re-emerged as a strand to critically examine.
23

39
40
41

42 The embodied nature of the pilgrimage and our shared journey allowed me to observe and
43 discuss the beliefs with others in an intimate manner. This context enabled the abstraction of
44 faith to be performed and felt in the mutual island experiences of ritual and fellowship.
45 Particular insights were forged through these connections which need to be appreciated as
46 emerging from the specifics of the context and people involved (see Alvesson 2003). Sitting
47 together barefoot, our shared location enabled conversations through which understanding of
48 the pilgrimage was co-produced. In these encounters, I had spiritual empathies with research
49 participants and I had profoundly respectful responses, while at other times there was
50
51
52
53
54
55
56
57
58
59
60

1
2
3 dissonance. My faith formed a thread within the process, generating affinities, affects, and
4 frictions. This is a common pilgrim experience, you are brought in contact with a variety of
5 different people which present opportunities for conversation, disagreement, and personal
6 reflection (Frey, 1998). Simultaneously, encountering people you identify with, and others
7 you do not, is a feature of social research (Moser, 2008).
8
9
10
11
12
13
14
15
16

17 Conversations with more liberal, usually younger, and even 'agnostic' Catholics were
18 comfortable terrain. I recognized their dispositions as having a belief in something beyond
19 themselves, which was manifest in irregular mass attendance. My faith position was
20 buttressed as I felt solidarities. We were culturally Catholic together: it presented a ritualized
21 existential framework while we separated ourselves from the Church's horrendous scandals
22 and its socially conservative teachings. Other people resisted being referred to as religious,
23 but understood themselves as everyday Catholics who worshiped weekly and tried to live
24 good lives.
25
26
27
28
29
30
31
32
33
34
35
36
37

38 To different degrees, I also encountered pilgrims of considerable faith that was manifest in
39 assorted forms. There were traditionalists who expressed support of Catholic doctrine on
40 social matters, particularly concerning sexual 'morals' and gender identities. In these
41 instances, there was a bifurcation of my pilgrim-researcher role, as I personally had
42 (unspoken) issues with their perspectives, while they were also providing insight into their
43 motivations. Aware of my roles as a researcher and a guest in the sanctuary, I let these
44 comments pass without confronting them. Elsewhere, I met several pilgrims who conveyed a
45 deep faith in talking about their motivations in praying for sick loved ones. The very personal
46 motivation of Mary, one of the research participants, still sticks with me:
47
48
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3 What brought me anyway was I had a grandchild that I wanted to say prayers
4 for special prayers. Eh, he had after been diagnosed with autism. So that's
5 really why I came. To know would I get help and everything for him.
6
7
8
9

10 She firmly believed in pilgrimage as a means of seeking divine assistance and offering
11 thanksgiving. In these moments, I viscerally and humbly witnessed the comfort and strength
12 that religion offers people enduring hardships. Our shared conversation generated new
13 understandings of pilgrimage, as a process that allowed people to explore and express their
14 faith.
15
16
17
18
19
20
21
22
23

24 Meeting faiths that were similar and different to mine resulted in entanglements while
25 underlining the value of my positionality in reaching new understanding. In my research
26 diary, I recorded some of these impressions:
27
28
29

30 In talking, faith is many things (even for one person). It is religious, prayers
31 and prescribed rituals; it is spiritual, an expression of forces beyond us and
32 connections between us; it is belief in something, even when you are unsure
33 what it is; it is a belief in the power of this place.
34
35
36
37
38
39

40 Lough Derg brought me into a renewed appreciation of faith as a complexity for most people
41 that blends the transcendent and immanent through located practices. This liminal island
42 enabled free discussion of this often unexplored topic, while also locating it in the mutual
43 experience of the pilgrimage. It was by sharing this journey, by performing sets of prayer,
44 and walking barefoot together with people that I reached these personally resonant insights.
45
46
47
48
49
50
51
52
53

54 While I went into my fieldwork conscious of my positionality, I was not prepared for faith to
55 emerge as one of the more significant considerations. My research motivation has always
56 been geographical interest. The spatial dimensions of religiosity/spirituality offered a distinct
57
58
59
60

1
2
3 avenue to understand human experience and meaning-making. However, Lough Derg
4
5 generated a shifting faith positionality as the beliefs of others and my attempts to understand
6
7 these stances affected me. I found myself re-considering my faith as I tried to locate it in
8
9 reference to others. Could it even compare to a sixty-something year old woman praying with
10
11 all her being for a grandchild? Was ‘cultural Catholicism’ a cop out, neither willing to fully
12
13 commit or completely leave? While these are questions that can occupy any interrogation of
14
15 faith, they were framed within the pilgrimage/research. Ultimately, I became more assured of
16
17 my identity as a progressive Christian - including a transition to the Church of Ireland - as my
18
19 encounters with others presented a structure to understand what faith is and what it can be.
20
21
22
23
24
25

26 Pilgrimages are valued as combining physical practices and spiritual/personal reflections in
27
28 potential-laden journeys. To travel with people and encounter their faith is a privilege of my
29
30 work, and a component that affected me more than I had expected. My dual complementary
31
32 role as pilgrim and researcher served to inform both dimensions strengthening my auto-
33
34 ethnography and shaping my own faith. At Lough Derg, in the midst of prayers, fasting, and
35
36 spiritual atmospheres, my fellows helped me to become a pilgrim.
37
38
39
40
41

42 **Faith, positionality and archival research: Ruth’s reflections**

43
44 I engaged with a Methodist community in north London who were celebrating their
45
46 bicentenary and reconstructing their church building. Starting as a public-heritage event, the
47
48 project morphed into participatory research as it began to explore the impact of changing the
49
50 church space on the contemporary congregation’s everyday experiences of faith. Although
51
52 historical geographers have demonstrated the possibility of using participatory methods
53
54 (DeSilvey, 2007; DeLyser, 2014; Patchett, 2016), they have always ‘participated’ with long-
55
56 gone communities. This project was different because I used historical geography as a tool
57
58
59
60

1
2
3 for participation with a contemporary community. Undertaken during the final year of my
4
5 (entirely historical) PhD, I approached this project as an opportunity to share my knowledge
6
7 and archival skills for the benefit of a non-academic audience. While many academics are
8
9 motivated to do the same for secular - often political - reasons, I was principally prompted by
10
11 a personal form of Christian socialism. This not only inspires me to find the voices of
12
13 ordinary people in historical archives, but also share these with contemporary congregations
14
15 in order to emphasize the value of individuals and their personal experiences of church and
16
17 faith today.
18
19
20
21
22

23
24 Between 2015 and 2016 the north-London Methodist community I worked with demolished
25
26 and redeveloped their post-1945 building. While this (re)construction took place, the church's
27
28 minister learned that the planned reopening was scheduled for exactly two-hundred years
29
30 after the first Methodist church was opened on the same site. Assembling a team interested in
31
32 Methodist history, local history, and community identity, the minister initially envisaged an
33
34 exhibition to position the new building in its historical context. However, conversations with
35
36 the minister and regular congregation members indicated that such a project would have been
37
38 an unsatisfactory response to the church's requirements. As the church community prepared
39
40 for its new building, they needed a context to discuss and reflect on the consequences of
41
42 losing their old one and getting something new. Although the practicalities of this process
43
44 had been discussed, the more personal and emotional effects of this change had been given
45
46 less attention. Therefore, it seemed insufficient to educate the congregation about their
47
48 church's history. Instead I drew on the archival approaches I had developed during my PhD
49
50 to enliven the mundane stories of ordinary Methodist congregants in the nineteenth and
51
52 twentieth centuries (Slatter, 2019), to inform a participatory project that used archives to give
53
54 current congregation members an opportunity to reflect on their memories of, and
55
56
57
58
59
60

1
2
3 experiences within their old church buildings, and express concerns about the design of the
4
5 new church building and how it might impact their religious practices.
6
7
8
9

10 The exhibition format was maintained, but the process of developing it and the content it
11 included were reconsidered. First, I undertook archival research into the church's history, but
12 rather than reconstructing its architectural story I reflected on ways in which different
13 congregation members had used and felt about their buildings over time. Before the
14 exhibition I shared these insights with congregation members and gave them a chance to
15 respond and add their own stories. In the exhibition, archival insights were displayed
16 alongside art work by congregation members in response to their old buildings, portraits of
17 congregants in the new building accompanied by oral history interviews, and interactive
18 exhibits where visitors were invited to make their own visual responses to the new building.
19
20
21
22
23
24
25
26
27
28
29
30
31
32

33 In order to facilitate the co-production of material for the project's exhibition, I attempted to
34 build relationships with members of the church's congregation by attending church services
35 and activities. I hoped that by engaging in the community's religious practices I would be
36 able to find commonalities that would demonstrate my interest in, and respect for
37 congregants' experiences of the church space. However, I quickly realized that both my
38 personal and professional positionalities made such relationships and conversations difficult.
39
40
41
42
43
44
45
46 Although a Christian, with experience of being part of a nonconformist (Baptist)
47 congregation and similar theological perspectives to this church and its congregants, these
48 spiritual similarities were not consistently helpful and were at times detrimental. Initially, my
49 personal faith and churchmanship were important: they focused my attention on the everyday
50 aspects of religious practice within my broader research and motivated me to redesign this
51 project so that it placed greater importance on congregants' personal experiences of faith. My
52
53
54
55
56
57
58
59
60

1
2
3 faith and experiences of church also allowed me to build trusting relationships with the
4 church's leadership. As a result, they not only trusted me with access to their properties and
5 archives, but also allowed me to develop the project beyond their initial conceptions because
6 I had demonstrated respect for, and agreement with, their theological aims.
7
8
9

10
11
12
13
14 However, my personal faith did little to help me build relationships with members of the
15 congregation. Congregants were suspicious when I attended services, asking where I attended
16 church, bemused that I would choose to worship with them rather than at my own church, and
17 suspicious that this decision implied lack of commitment to my personal faith. Furthermore,
18 similarities between the theology and churchmanship of the congregation and myself were
19 largely undermined by the vast distinctions between other aspects of our identities. While I
20 am a young white-British woman, most of the church's congregation members were retired
21 and of West Indian origin. As a result, many congregation members were more comfortable
22 talking to other members of the project team, who did not share their faith but were closer in
23 age and life experience. Therefore, elements of my positionality beyond my religious faith
24 were more important in influencing the effective co-production of knowledge with this
25 community.
26
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44

45 Indeed, further consideration of this project has suggested that it was my professional status,
46 rather than my personal positionality, that most significantly impacted my attempts to co-
47 produce knowledge with the church's community. Initially, my professional identity as a PhD
48 student, my archival experience, and contextual knowledge of nineteenth- and early
49 twentieth-century metropolitan Methodism, lead the church to approach me to participate in
50 this project. The church leadership were aware that they had important archival documents,
51 but not the knowledge or skill to analyse them. However, as the project developed my
52
53
54
55
56
57
58
59
60

1
2
3 archival skills established me as the 'expert', a mediator between the congregation and what
4 they considered to be distant and incomprehensible archival sources. Therefore, I was
5
6 perceived as the sum of my academic skills, rather than an individual and using my archival
7
8 skills to undertake research to share with the community complicated the equitable
9
10 conversations I sought. The congregation often assumed that I knew best and that the
11
12 information we could co-create would not be as valuable as the information in the archives.
13
14 This was uncomfortable and unhelpful, creating a barrier between me and the church's
15
16 congregation and making it difficult to gain insights into their memories and experiences of
17
18 the church's old buildings.
19
20
21
22
23
24
25

26 Nevertheless, my attempts to undertake participatory research with the aid of archival
27
28 research did provide some insights into the importance of faith spaces and materialities in
29
30 individuals' everyday experiences of church. One former congregation member reflected on
31
32 how some of their fondest memories of being part of this Methodist community revolved
33
34 around fundraising for the demolition of the Victorian chapel and construction of the post-
35
36 1945 structure. While another noted how much they would miss the radiator in the vestry of
37
38 the (now) demolished post-1945 church building, as it was where they had first prayed to
39
40 God. Further work is required to more effectively integrate archival approaches within
41
42 participatory methodologies and mitigate the impact that utilising archival skills has on the
43
44 relationship between scholars and the communities they work with. For instance, rather than
45
46 using my experience to interpret the archives, I could have trained members of the
47
48 community. However, such a process requires extensive buy-in from the community, is time
49
50 consuming, and therefore expensive. Therefore, it was not only infeasible within the limited
51
52 time and budget that was available for this project, but probably for many others I may be
53
54 involved in the future.
55
56
57
58
59
60

1
2
3
4
5
6 More fundamentally, undertaking this project changed and raised questions about my
7
8 positionality in ways I had not anticipated. Most particularly, my experience of how the
9
10 differences between age, ethnic and educational identifiers had a greater impact on my
11
12 relationships with members of this community than our shared faith perspectives, made me
13
14 reflect on how personal identifying features are fundamental to peoples' experiences within
15
16 faith spaces, but are rarely clear within the archive. Researching both the church's past and
17
18 present also made me sincerely attached to this community. As a result, the way in which I
19
20 have reflected on and written about this project has been imbued with a sense of care that
21
22 goes beyond high ethical standards and I have to acknowledge that my positionality is not
23
24 simply informed by my faith, personality, or professional identity, but also my attachment to
25
26 this community and its members.
27
28
29
30
31
32

33 **Discussion**

34
35 There are three themes that draw our reflections together: first, how the researcher's faith
36
37 positionality can have varying importance at different phases of research; secondly, the
38
39 relationship between faith positionalities and other aspects of an individual's positionality;
40
41 and thirdly, the relative and shifting nature of faith positionalities during the course of the
42
43 research.
44
45
46
47
48

49 ***The varying effects of researchers' faith positionalities***

50
51 Considering each phase of the research - choosing, beginning, interpreting data, closing the
52
53 research - this section will explore the varying relevance of our faith positionalities during the
54
55 process. An important frame to this discussion is that our faith positionalities were not static
56
57
58
59
60

1
2
3 and, as explored in the third section of the discussion, our positionalities were changed by the
4
5 research process.
6
7
8
9

10 Our different faith positions variously influenced how we chose to undertake the research
11 projects. For example, Stephanie's Christian faith both motivated her to establish Lunch as
12 part of her PhD research, and affected how she established Lunch as a faith-based project
13 without religious teaching. Our faith positionalities proved both opportunistic and
14 problematic as we began our research. Richard found that people assumed he held a faith
15 motivation for his research which helped him to gain access. Initially Stephanie also found
16 that her faith was advantageous in establishing relationships with gatekeepers and
17 participants at Lunch because it mattered to them if she held a Christian faith. However,
18 whilst Stephanie's faith was important in establishing relationships, this did not initially
19 prove enough to override people's suspicions of her being in her twenties, a researcher, and
20 from outside the local area; other aspects of Stephanie's positionality interacted with her faith
21 in how others perceived her. For successful relationships to be established, Stephanie needed
22 to show over time that she was committed to the church and that she could be trusted. Ruth
23 also found that her faith positionality could be double-edged in how she established the
24 research. Whilst she was primarily approached to undertake the research as a result of her
25 archival skills, it was attractive to the church leader that they shared a theological positioning.
26 However, Ruth then found that her shared faith was problematic in establishing relationships
27 with members of the church community because they doubted the authenticity of her faith
28 when she joined them for worship on Sundays; they questioned why she was not worshipping
29 at her regular church. Overall, whilst our shared faith could be an opportunity and point of
30 commonality as we established our research, it could also create suspicion, and other aspects
31 of our positionalities could not be ignored.
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47
48
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3
4
5
6 Next, our faith positionalities had varying effects on how we interpreted experiences and data
7
8 in our research. Ruth has reflected that her faith encouraged her to place more emphasis upon
9
10 individuals' personal experiences of faith and, as expanded upon in section three of this
11
12 discussion, Richard felt challenged and humbled by others' faith views to such an extent that
13
14 he moved from Catholicism to Anglicanism. For each of us, sharing a broad Christian faith
15
16 positionality with our research participants gave us a particular understanding of their
17
18 experiences. This is not to say sharing faith results in more effective research. Rather, it
19
20 provided each of us with a particular set of insights because sharing this overall faith
21
22 positionality gave a closer starting point and shared context for understanding faith
23
24 participants' experiences. This is a position that we argue should be encouraged in
25
26 participatory research, rather than continuously defended.
27
28
29
30
31
32

33 Finally, our faith positionalities could influence how the research ended. This was
34
35 particularly notable for Stephanie, who early on in the process of running Lunch had
36
37 'enough' material for her PhD thesis to be secured but persevered in running Lunch because
38
39 she felt through her faith that she had made a commitment to respond to holiday hunger. In
40
41 this respect, Stephanie's faith affected both the running of Lunch and the direction that her
42
43 PhD thesis took: the research looked not only at how Christians are motivated to volunteer to
44
45 respond to holiday hunger, but also how they persist in volunteering. For Ruth, although there
46
47 was a clearly defined end to her project (the completion of the exhibition and the bicentenary
48
49 events), her shared faith with this community (particularly its leadership) has meant that her
50
51 relationship with them has evolved into a friendship and she continues to be invited to events
52
53 and contribute to the church's research into its past.
54
55
56
57
58
59
60

1
2
3 ***The intersections between our faith positionalities and other positionalities***
4

5 Examining our positionalities highlighted the inherent intersectionalities involved. While
6 faith is the analytical priority for this paper, it remains one strand in our multifaceted
7
8 identities which influenced the research process.
9
10
11
12

13
14 A hierarchy of characteristics emerged for Ruth as congregation members found it easier to
15 associate with researchers based on age and ethnicity rather than faith. These dynamics were
16 unpredictable, disrupting the religious context of the research as other identifiers resonated
17 more with the participants. In contrast, due to the relative uniformity of the pilgrim group,
18
19 Richard's identification as a 'White, Heterosexual, Irish, Settled, Catholic' meant that he
20 easily mixed with his fellows. On multiple levels he was an insider; however, he also found
21 himself more aligned with some participants than others. Finally, as already mentioned, while
22
23 Stephanie's faith helped to build trust with members of the church that hosted Lunch, her age,
24 relative privilege, and status as geographical 'outsider' also complicated her relationship with
25 this community. Each of our reflections highlight how researchers are multifaceted humans
26 who bring a series of realities that impact on our work and how this can have a range of
27 effects at different times.
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44

45 A foundational element of participatory research is the acknowledgment of our role as
46 researchers. We found that our professional function tended to be the key characteristic by
47 which we were defined. This is especially present in Ruth's case where she was invited to
48 participate by the Church leadership due to her expertise and skills. Therefore, while she was
49 motivated by a desire to co-create knowledge with a Christian community, her status as an
50 expert dominated her interactions with the group. Stephanie's case was more complex, in that
51 she was the project leader and researcher, who was driven by the desire to establish a
52
53
54
55
56
57
58
59
60

1
2
3 sustainable Christian response to holiday hunger. Some of her choices as leader, such as the
4 role of faith/evangelism in the scheme, reinforced her formal role and affected relationships
5 with volunteers. In each project, while being geographers with faith, the research role
6 remained a central feature of our interactions. While there are nuances involved, rigorous
7 self-reflection in participatory research needs to highlight this continuing reality.
8
9
10
11
12
13

14
15
16
17 This examination of our experiences has underlined the fluid and iterative nature of our work.
18 As Herod (1999) discussed, positionality translocates through identities with some being (de-
19)emphasized at different times and places. At points in our research, we were each more
20 believer than academic, more geographer than co-participant, and vice-versa. Each of us
21 occupied a 'space of 'betweenness'' having 'various levels of similarity and difference with
22 the research participants' (Hopkins, 2009, p.6). A greater focus on our social skills and
23 emotional negotiations is highly relevant in these circumstances (Caretta & Jokinen, 2017;
24 Moser, 2008). Although our faith positions proved advantageous in some circumstances, our
25 interpersonal capacities were foundational to negotiating conditions in the field.

40 ***How our positionality changed in response to undertaking participatory research***

41
42 Finally, because participatory research fundamentally prioritizes the co-production of
43 knowledge between researchers and participants, it is necessary to reflect on how undertaking
44 such research changes or influences a researcher's faith and may affect data interpretation.
45
46
47
48
49
50

51 Stephanie reflected on how undertaking this research reaffirmed her belief that faith should
52 result in action to support individuals' practical needs. For Richard, undertaking this piece of
53 participatory research contributed to a change in his faith position, leading to a growing
54 awareness of his progressive Christian values and resulting in a reassessment of his
55
56
57
58
59
60

1
2
3 faith. These experiences highlight the differences between each of our faith positionalities,
4
5 but also how these faith positionalities changed over time in response to the research we
6
7 undertook. Therefore, geographers - with faith or not - need to be aware of how engaging in
8
9 participatory geographies of religion necessitates openness to the beliefs, practices, and
10
11 experiences of those they are engaging with and remain alert to their - potentially changing -
12
13 faith positionalities while undertaking research with religious communities. Consequently,
14
15 undertaking and weaving autoethnographies within such research is important, as it could
16
17 make researchers more aware of the impact of the communities they are studying on their
18
19 emotions and opinions, and could therefore contribute to the deconstruction of the barriers
20
21 between researchers and subjects.
22

27

28 **Conclusions**

29
30 This paper has extended the limited attention to positionality in the geographies of religion,
31
32 faith and spirituality by examining how participatory approaches to this area raise particular
33
34 questions about researchers' positionalities. Our reflections have progressed considerations of
35
36 who we are as geographers in relation to our study topic, fellow participants, and faith. This
37
38 process has led us to critically respond to encounters in the field, alongside our individual and
39
40 collective identities as researchers with faith. Building on the momentum surrounding
41
42 participatory geographies, we encourage greater deployments of these approaches in the
43
44 geographies of religion, spirituality, and faith. However, we argue that in order for these
45
46 methods to be used successfully, more careful considerations of the nature and impact of
47
48 positionality needs to be undertaken within geographical studies of religion. In particular, this
49
50 paper primarily calls for - and is a step towards - greater critical reflection on: how
51
52 researchers interact with faith communities and generate participative scholarship; the
53
54 temporalities of positionalities, alongside the social and emotional character of fieldwork; and
55
56
57
58
59
60

1
2
3 the fluid nature of positionality in relation to participants' stances. As there was a call for
4 religion to be acknowledged as part of identity (Dwyer, 2016), so we now call for faith to be
5 thoroughly incorporated into reflections on positionality.
6
7
8
9

10
11
12 Through our three vignettes, we have argued that sharing faith and experiences of religious
13 ideas and practices with participants can be beneficial components of the research process,
14 rather than features to be curtailed and kept private. Our case studies demonstrate that this
15 mutuality grants researchers particular relationships with faith communities alongside
16 analytical opportunities to provide detailed and located accounts of spiritual experiences and
17 practices and to generate more inclusive forms of knowledge. As a result, faith positionality
18 should be understood as a dimension of this work rather than a limitation. However, it is also
19 important to clarify that belief is not a necessity or superiority, it is a strand of researchers'
20 identities that is relevant to their choice of study and its performance. Furthermore, the
21 personal nature of faith and variations between individuals and groups means that shared
22 faith does not necessarily result in researchers having the same beliefs or experiences as their
23 participants. Despite being three White, Western Christians undertaking participatory
24 research within Christian communities, the relative nature of belief and variations between
25 and within Christian groups produced differences and tensions. Clearly there is a need for
26 geographers to reflect on this further within other ethnic, cultural and religious contexts,
27 including consideration of researchers with faith who are engaging with communities of other
28 faiths. Each of our vignettes illustrates that although personal faith contributed to our ability
29 to build relationships, 'shared faith' is not a quick-fix for complete parity with, or
30 understanding of faith groups. Indeed, a mutual faith can be a complication that prevents
31 open conversations and builds mistrust between researchers and participants.

2
3 Finally this paper makes three key contributions on positionality that resonate not only for
4 faith-based research, but also other participatory and socially-oriented studies in geography
5 and the wider academy. Firstly, there is a need for social, cultural and historical geographers
6 to actively reflect on their moral and/or faith positions in their research. This is needed in
7 order that the role of faith in both researchers' and participants' daily lives is taken seriously
8 alongside other aspects of positionality and not left to the remit of geographers specifically
9 focussing on faith. This is particularly relevant for researchers pursuing work for ethical
10 reasons, particularly in challenging hegemonic neoliberal policies and practices, including
11 social justice and climate activism. For this to be achieved, clear and honest conversations
12 about faith and positionality need to be incorporated in all areas of academic practice
13 including research publications, impact outputs and undergraduate teaching.

24
25
26
27
28
29
30

31 Secondly, this paper's foregrounding of faith provides a clear example of how positionality is
32 not static, but ebbs and flows, and is multifaceted with different strands shaping researchers'
33 interactions and connections with participants. Appreciation of this complex fluidity should
34 be applied to other settings. Relationships with people, places, and non-human presences
35 evolve affecting our analysis and approaches, while at different times gender, ethnicity, age,
36 class, faith, is more relevant. Critical engagements with research praxis and reflections on
37 interactions with participant communities demand more robust considerations of not only
38 positionality, but how it evolves and shifts.
39
40
41
42
43
44
45
46
47
48
49
50

51 This leads to the third point that researchers are never isolated from the research process. As
52 researchers with faith, we each found that our positionality - and even our personal faith -
53 was affected by the communities we engaged with. More broadly, all human geographers are
54 feeling, thinking individuals who interact with and are influenced by other thinking, feeling
55
56
57
58
59
60

1
2
3 humans. Therefore, we are all necessarily involved with our research, especially when using
4 participatory approaches, which hence demands us to have tools that account for and reflect
5 on this involvement, and mechanisms to support researchers engaging in more challenging
6 and emotionally draining work.
