

Journal of Information Systems Security (JISSec): Green Open Access Policy

1. Introduction:

The Journal of Information Systems Security (JISSec) is steadfast in its commitment to advancing academic research and ensuring its wide accessibility. In line with this commitment, JISSec has adopted the Green Open Access model, a progressive approach to scholarly publishing.

2. Policy Overview:

Under the Green Open Access model, JISSec allows authors to immediately archive their published contributions, eliminating the traditional constraints of embargo periods. This ensures that research is disseminated rapidly, benefiting both the authors and the broader academic community.

3. Rationale:

- **Promotion of Scholarly Communication:** By allowing immediate archiving, JISSec ensures that research findings are shared promptly, fostering timely discussions and further research in the field of Information Systems Security.
- **Increased Visibility and Citations:** Research that is readily available tends to garner more attention and, consequently, more citations. This not only elevates the profile of the authors but also enhances the reputation of JISSec as a leading journal in its domain.
- **Support for Author Autonomy:** The Green Open Access model respects and supports the rights of authors, granting them greater control over the dissemination of their work. This fosters a more collaborative relationship between the journal and its contributors.
- **Democratization of Knowledge:** JISSec believes in the democratization of knowledge. By making research widely accessible, we ensure that valuable insights are available to researchers, students, and professionals across the globe, regardless of institutional affiliations or subscriptions.

4. Implementation:

Authors are encouraged to archive either the post-peer review accepted manuscript or the final published version of their article. This can be done on personal websites, institutional repositories, or any publicly-accessible platform dedicated to academic research.

The adoption of the Green Open Access model by JISSec underscores our dedication to the advancement of Information Systems Security research. We remain committed to serving our authors, readers, and the broader academic community by ensuring the free and timely dissemination of high-quality research.
